QUIET AND COMFORTABLE

ANYWAY FLOOR woven flooring series combines our expertise with our designers' contemporary vision.Our design studio nurtures fresh perspectives and a unique identity that is artistically expressed in the collection's eight scopes.

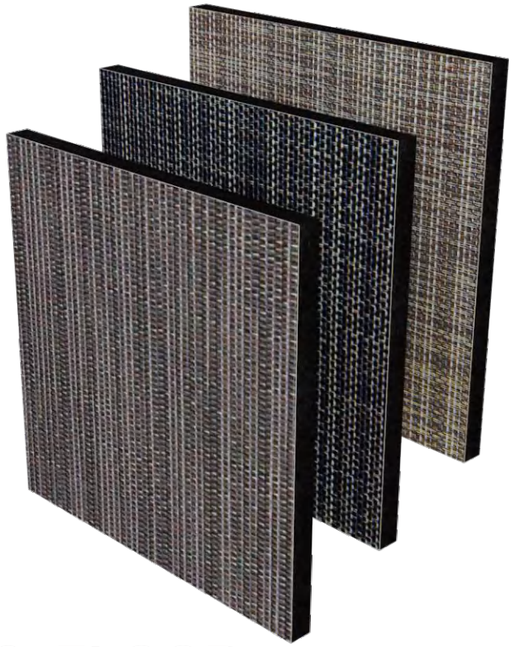

The rich texture inspired by natural and elegant subtle and complex colors reveals the aesthetic qualities of our resolutely designed flooring materials. Its delicate and timeless
neutral palette comes in a range of deep, delicate tones.

Bold colors add personality and personality, while graphic effects are chosen from classic to bold, creating a unique look

Your floor becomes
A FORM OF CREATIVITY
FLOORING AN ART FORM

THE LOOK AND FEEL OF TEXTILE WITH TOTALLY UNIQUE PROPERTIES

Woven from revolutionary fibres, floor covering optionscombine the remarkable durability of vinyl with the aesthetic appealand texture of traditional carpeting.A true technical innovation developed for the most demanding publicareas, such as hotels, offices, shops, restaurants, etc.,flooring is durable, comfortable, easy to maintain and attractivelydesigned.

ACOUSTIC **FLOOR**

The polyester fiber is made into cocoon cotton shape by high-tech hot pressing to achieve density diversity and ensure breathability. It is an excellent product in sound absorbing thermal insulation materials. It can shorten the adjustment of reverberation time according to different needs, remove sound impurities, improve sound effect, and improve speech clarity.

Woven flooring offers countless layout possibilities. Free yourself from standard layouts, or change the interior by mixing references to complement them with shapes to create rhythm, perspective, and reflection. Let your imagination run wild. Create your own rules and change your floor to become a design feature.

From the office to the hotel to the home, every space is unique, and so are your design choices. The woven floor has a wide range of decorative, thermal insulation, flame retardant, light body, easy processing, stability, impact resistance, easy maintenance, elastic, toughness, wear resistance, impact resistance, tear resistance, not easy to scratch and other characteristics.

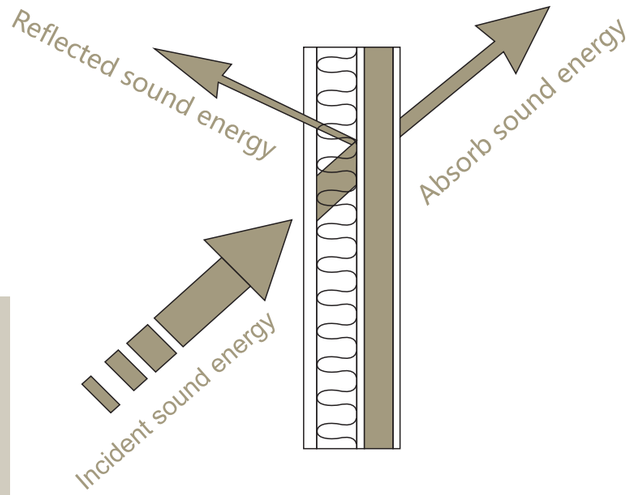

PRODUCT PRINCIPLE

The principle of sound absorption of sound-absorbing panels

When the sound wave is incident on the porous sound absorbing material.

Due to the viscous resistance of the air, the vibration friction between the air and the hole

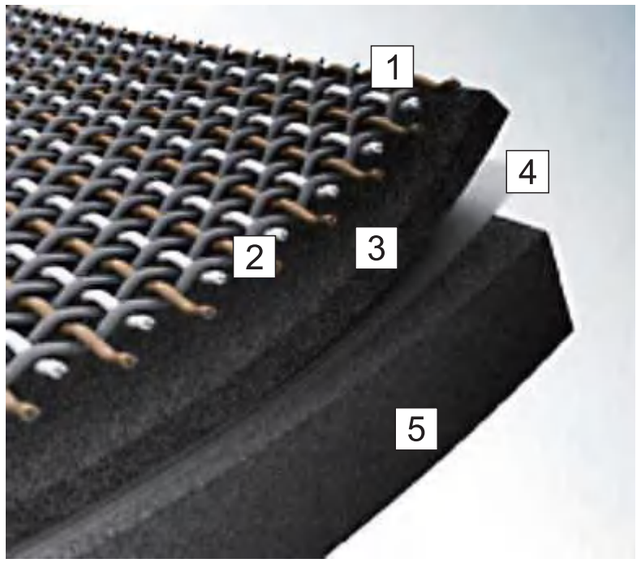

A considerable part of the sound energy is converted into heat energy and absorbed.

HIGH-DENSITY SOUND ABSORPTION AND NOISE REDUCTION

In the noise range of 125~4000HZ, the high sound absorption coefficient reaches more than 0.9.

HIGH-TECH BACKING

1 Woven top side

2 Monofilament polyester core

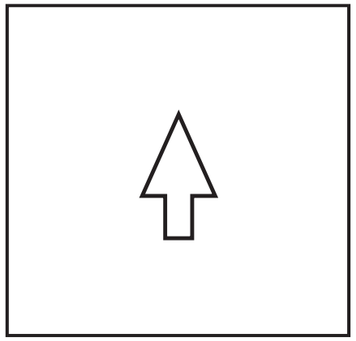

3 Very high density foam

4 Fibreglass layer

5 Acoustic foam

EASY
TO INSTALL & TO MAINTAIN

ACOUSTIC FLOOR
FAST AND SIMPLE TO INSTALL ON ANY KIND OF SURFACE

Like any other flexible flooring, installation is done by gluing the material directlyto any kind of flat, clean, dry, stiff surface. To save time and increase flexibility,you can also install the tiles with a non-permanent glue.

A UNIQUE COMPOSITIONFOR EXTREMELY DURABLE,EASY TO MAINTAINFLOORING

Although the structure of the weave makes it appearto have a certain relief element, the exclusiveassembly process used by Dickson guarantees itis absolutely waterproof, dustproof and stainproof.The warp and weft yarns are heat-sealed togetherand assembled to the backing while they’re still hotto prevent the penetration of any dirt or liquids inbetween the fibres so it stays on the surface for easyclean-up.woven flooring ensures optimal qualitysanitary conditions. Rotproof, antibacterial, andimpervious to dust mites, mould spores and fungus,the impermeable surface makes it easy to keep cleanand prevents tough to remove stains like coffee,wine, fruit jam, blood, etc...
